Investor overview

Anunaki Ventures Ltd is an AI-native venture laboratory led by one founder.
Specialized AI agents support research, design, engineering and operations.

Investment thesis

Build shared workflows and infrastructure that can be reused across ventures.
Test products with disciplined release gates; focus on products that demonstrate demand.

Capital priorities

Expand computing and agent capacity; complete integrations, independent testing and pilots.
Allocate subsequent capital according to evidence of adoption, retention and unit economics.

Indicative roadmap

0-3 months: prioritize ventures, address bottlenecks and finish selected release checks.
3-6 months: run pilots and measure adoption. 6-12 months: scale validated products.

Next step

I welcome discussions with investors who understand AI-native operations and staged validation.
Funding amount, structure, valuation and terms are to be discussed; no raise terms are announced.
